

Abstract

The invention describes novel peptides which, as ligands of the integrin $\alpha_v\beta_6$, are biologically active.

5 These peptides all have a common structural motif, namely - **Asp Leu Xaa Xaa Leu** -, or in a preferred form -Arg Xaa **Asp Leu Xaa Xaa Leu Arg** -, where Xaa is any desired amino acid residue. The peptides according to

10 of the $\alpha_v\beta_6$ integrin receptor and thus for the treatment of various diseases and pathological findings.
